what are bio fuels

Biofuels are hydrocarbon fuels produced from organic matter (living or once-living material) in a short period. They are a renewable resource made from recently grown biomass (plant or animal matter) and can be solid (wood, dried plant material, and manure), liquid (bioethanol and biodiesel), or gaseous (biogas).

Government of India initiatives to promote the use of Biofuels

Since 2014, the Government of India has taken a number of initiatives to increase the blending of biofuels, including:

- Administrative price mechanism for ethanol
- Simplifying the procurement procedures of OMCs
- Amending the provisions of Industries (Development & Regulation) Act, 1951
- Enabling the lignocellulosic route for ethanol procurement
- Expanding the scope of raw materials for ethanol production
- Allowing the use of surplus food grains for ethanol production
- Thrust on Advanced Biofuels
